Setting up Flask & Virtual environments

Set up the virtual environment to look like this:

Make your project folder the directory. Then at the command line, enter this:

- Pip3 install virtualenv
- Virtualenv env
- env\Scripts\activate.bat

Then, you will be within the virtual environment

Alternatively you could do this:

- P:\BHarding\Web Apps>python -m venv ./venv/
- P:\BHarding\Web Apps\project>.\venv\Scripts\activate

For Flask install:

- Pip install flask
- Pip freeze > requirements.txt
- Flask run
- (venv) P:\BHarding\Web Apps\project>pip install flask-sqlalchemy

How to select Python interpreter: CTRL + SHIFT + P

How to set up your environment:
